Lights Can Kill

Help protect night-migrating songbirds from deadly collisions with buildings.

- Turn off all lights in unused interior spaces
- Turn off non-security overhead lighting in occupied spaces
- Use task lighting and draw blinds

Help an injured bird

- Find a small cardboard box or an unwaxed paper bag.
- Gently enclose the injured bird with both hands and place inside the bag or box. Close securely.
- Place the bird in a safe, quiet location. Do not offer food or water.
- Immediately call your local wildlife rehabilitation facility for next steps.
